

Front-End developer

As a Frontend Engineer, you are working on our most visible projects - right for our users. Your main goal beyond of making our users happy is to write a highly modular, maintainable javascript and participate in architectural decisions. Our current stack:

- Bower
- Grunt
- AngularJS

Minimum qualifications

- Experience in JavaScript (5+ years)
- Experience in web programming
- Experience with git and github

Preferred qualifications

- Test-Driven Development
- Lean development

How we work?

Your development tasks consist 50% of larger features you independently add to the project, 30% of bugs and small features you work into the system, 20% of writing tests and refactoring code. We are absolutely open and even curious for new ideas and do not hesitate to spawn new projects! Hacking IoT? Great! Working on your own JavaScript library? Let's give it a test-run in our projects!

Benefits + Perks

Our team is located in a Co-Working space in Vienna near Westbahnhof with numerous Meetups to talk about the latest trends, regular live casts from big events (Google IO, Facebook, WWDC, add yours) and we love to work on the latest technology. We regularly play table-tennis and once in a while we enjoy delicious food brought to us by great cooks.

Interested?

Write us a mail with a brief text about you, a picture of a dolphin (to make sure that you are able to fully read our job descriptions), CV, if you have one, and (most importantly) links to previous projects and GitHub accounts:
